

EMJAY®

VACUUM BREAKER

By MICROJET®

Emjay Vacuum Breaker

This hardy and resilient plastic fitting is ideal for all irrigation pipelines.

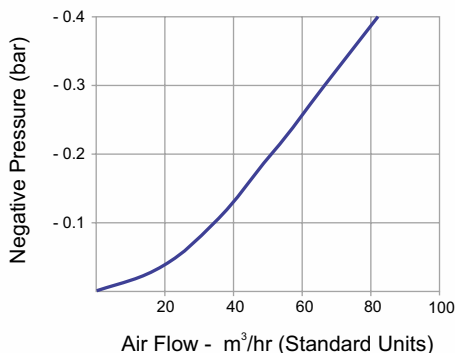

It is designed to help prevent clogging of drip lines by the ingress of dirt and other unwanted substances into the line under vacuum conditions, particularly as the lines drain.

It also prevents the collapsing of and damage to rigid or semi rigid pipes when a vacuum is created by water draining out.

It is particularly useful on undulating terrain.
